Junior Data Analyst with strong foundations in SQL, Excel, and Power BI.
Experienced in analyzing large datasets, building dashboards, and generating business insights through personal projects

Skills

- **SQL:** PostgreSQL, MySQL, MS SQL
- **Excel:** Pivot Tables, Power Pivot, Power Query, ETL, Formulas, Visualization
- **Python:** NumPy, Pandas, Matplotlib, Seaborn
- **Power BI:** Power Pivot, ETL, Modelling (Star Schema, Snowflake...), DAX, Dashboards

Projects

Data Analysis for an E-Commerce Company (SQL)

(GitHub: https://github.com/Aleksandre2221/DA_Portfolio_Projects/tree/main/SQL_Projects/E-Commerce_Sales_&_Performance_Analysis)

- Analyzed over **$40M** in sales data using SQL to evaluate revenue, customer behavior, and operational performance
- Calculated key **business KPI's** including AOV, RPU, Cancellation Rate, and Revenue Share by State and Category
- Identified **"Electronics"** as the **top-performing category (35.9% of Total Revenue)**
- Performed **RFM** analysis to segment customers and evaluate Customer Value
- Developed **Business Recommendations** to improve Retention, optimize Checkout Performance, and increase AOV

Online Retail Sales Analysis (Power BI)

(GitHub: https://github.com/Aleksandre2221/DA_Portfolio_Projects/tree/main/PowerBI_Projects/Online_Retail_Sales_Analysis)

- Processed a retail dataset of **50K transactions**, restructuring the original **65-column** dataset into a **Star Schema**
- Built **an interactive dashboard** to monitor business performance across Sales, Orders, Customers, and Products
- Analyzed customer segmentation, identifying the **35–50 age group** as the **highest revenue-generating** segment
- Discovered that a **small group of tech products** (e.g., Wireless Mouse, Speaker...) drives a **significant share of revenue**
- Assessed **operational metrics** to understand **order fulfillment efficiency**
- Provided **data-driven recommendations** to increase Average Order Value and improve customer retention strategies

Marketing & Sales Analytics per Retail (Excel)

(GitHub: https://github.com/Aleksandre2221/DA_Portfolio_Projects/tree/main/Excel_Projects/Marketing_&_Sales_Analytics_per_Retail)

- Processed a retail dataset of **100K+ transactions**, restructuring raw data into a **Star Schema** to enable efficient analysis
- Built an **interactive dashboard** to track key KPIs across Sales, Customers, Products, and Geography
- Analyzed customer segmentation, identifying the **18–24 age group as the main revenue driver (~80%)**
- Discovering that **Grocery generates ~30% of total revenue** and **water-related products dominate top sales**
- Revealing that the **UK contributes ~40% of total revenue**, with strong concentration in a single city (**Portsmouth**)
- Identified business risks and opportunities, providing **data-driven recommendations** to reduce market dependency, diversify customers, and optimize product strategy
